Researcher's full name: Nguyen Thi Huong

Thesis title: Developing the safe vegetable supply chain of retail businesses in Hanoi

Field of Study: Commercial business

Code: 9.34.01.21

Scientific Advisor (specify academic title, degree, and full name): Main Advisor: Assoc. Prof. Dr. Hoang Thanh Tung; Co-Advisor: Dr. Ho Trung Thanh

Training Institution: Institute of Strategy and Policy for Industry and Trade

1. Thesis summary:

This thesis examines the theoretical and practical foundations for developing safe vegetable supply chains for retail businesses. It analyzes the current state of safe vegetable supply chain development among retail businesses in Hanoi based on five key areas: Optimizing the structure of safe vegetable supply chains; Development of the scale and network of the safe vegetable supply chain; Enhancing added value in the safe vegetable supply chain; Strengthening linkages among members in the safe vegetable supply chain; Enhancing the position of retail enterprises in the safe vegetable supply chain. The thesis also examines factors affecting the development of the safe vegetable supply chain of retail businesses in Hanoi by testing models of factors affecting the development of the safe vegetable supply chain of retail businesses in Hanoi. Based on these studies, the thesis proposes solutions and recommendations for developing the safe vegetable supply chain of retail businesses.

In addition to the introduction, conclusion and recommendations, the list of research works and appendices, the thesis is structured into three chapters with the following main content:

Chapter 1: Theoretical and practical foundations for developing safe vegetable supply chains for retail businesses

Chapter 2: Current status of developing safe vegetable supply chains for retail businesses in Hanoi

Chapter 3: Solutions for developing safe vegetable supply chains for retail businesses in Hanoi

2. New findings of the thesis:

- The thesis supplements the theoretical basis for supply chain development and the factors affecting the development of safe vegetable supply chains for retail businesses.

- The thesis provides a basis for forming a theoretical framework for analyzing and evaluating the development of safe vegetable supply chains as well as supply chains for Vietnamese agricultural products.

- The thesis provides assessments of the current state of safe vegetable supply chain development among retail businesses in Hanoi;

- The thesis provides assessments of factors influencing the development of safe vegetable supply chains among retail businesses in Hanoi..

- The thesis proposes solutions and recommendations for developing the safe vegetable supply chain of retail businesses in Hanoi from now until 2030, with a vision to 2045.

3. Practical applications/potential applications and issues requiring further research:

- Apply the model of factors affecting the development of supply chains for agricultural products other than safe vegetables.

- Apply the model of factors affecting the development of safe vegetable supply chains in areas other than Hanoi.

- Expand the model to identify additional factors affecting supply chain development for validation;

- Expand the scope of the study beyond focusing solely on retail businesses.

- Propose more comprehensive solutions for supply chain development.
